

THE CUSTOMISED BPM SOLUTION

You will not always find a standard mode that fits your specific needs. **XML Process Customised** is a solution specifically designed to unique business processes.

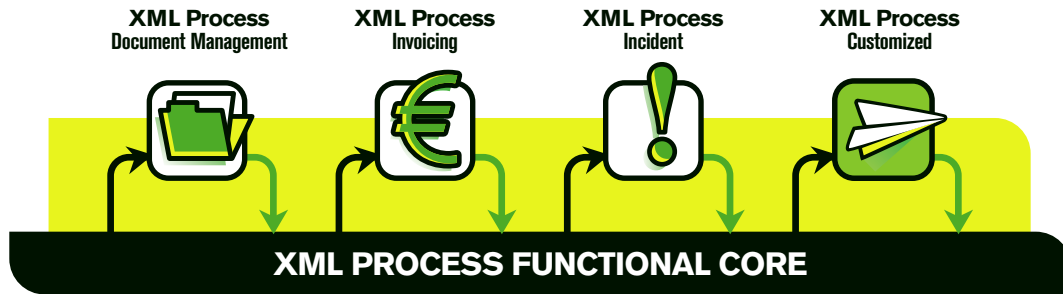

A team of professionals will analyse the specific process on-site with your company's personnel, studying its phases and singularities until completely understanding the problem.

With a UNE-EN ISO 9001:2000 quality standard certified work methodology and the use of the powerful **XML Process** core, the development team will adapt the product to your process and introduce it in your company through a **fast and low-cost project**.

XML Process Customised is part of a family of solutions known as BPM (Business Process Manager), a new software concept especially designed to the client's needs.

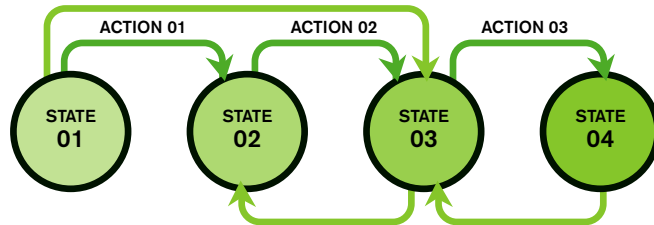

- A completely customised solution that responds to your company's specific needs.
- A fast, low-cost project based on an analysis of your business processes.
- Obtain sustained results that evolve with your company, adapting to changes.

With **XML Process Customised** you can enjoy the following advantages:

- › Adapting to your business process.
- › Personalised consultation.
- › A fast and low-cost project.
- › A quality certified work methodology.
- › A development based on a platform, not "from scratch."
- › A solution that includes all the advantages of the XML Process solutions.
- › A living tool, whose core is updated to adapt to new technologies.
- › User training.
- › Initial support workshops.
- › Support programmes.
- › Evolving maintenance programmes.

In comparison to those programmes developed from scratch, **XML Process Customised** adapts to your process using a robust platform that is common throughout the **XML Process** family of solutions. The resulting tool will directly have all the technological advantages found in all our products: online use, centralised document storage, security and access control, automatic system updates, online information publication, etc.

All **XML Process** applications are built from a common core of functions that are constantly evolving. Improvements to this core can be used in all **XML Process** solutions. This way your **XML Process Customised** tool will never become obsolete, taking the best from the latest available technology so you can constantly enjoy new functions.

The introduction of **XML Process Customised** in your company does not stop once the product is ready. All of our projects include user training, initial support workshops and programme support.

Processes in organisations evolve, change and improve. **XML Process Customised** will optimise productivity of the process it is applied to, and will help you detect possible improvements. Our evolving maintenance programmes allow you to adapt your **XML Process Customised** solution to future, necessary changes.

Visit www.xmlprocess.com to obtain more information about how **XML Process** can help you to boost your business.
