

Traditionally, billing software was limited to issuing and recording invoices. **XML Process Invoicing** takes control of company revenue and expenses a step further to offer you analytical information in real time so you can know your company's real status.

Digitise your suppliers' invoices, delivery notes, receipts, pictures of goods and all information relative to invoicing.

Your clients can check their invoices online and access their personalised rates.

Maintain an updated stock of goods relative to entries and exits; know the value of your stock in real time.

Link issued invoices with orders to know the specific benefits of each operation.

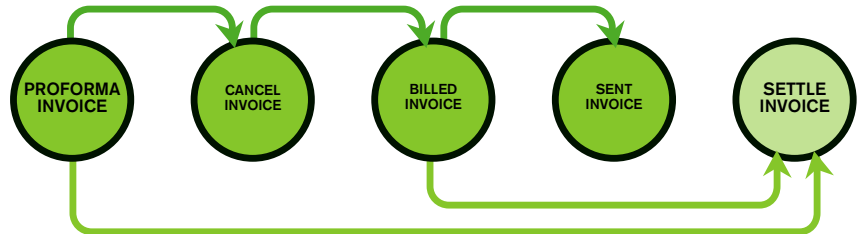

## INVOICING

- A comprehensive solution for complete control of your company's invoicing.
- Digitalise all of your suppliers' invoices and access them with a click. View your revenue and expenses by sector. Obtain customised analytical reports and diagrams. Graphically compare your invoicing with previous periods.
- Configure alarms to notify you of expiration dates, non-payments and routine invoices.

With **XML Process Invoicing** you can enjoy the following advantages:

- › Multi-company and multi-user ability.
- › Digitisation of received invoices and third party documents.
- › Web access for users and clients.
- › Manage and control stock.
- › Traceability of the invoicing process.
- › Classification of articles by types and families.
- › Rates per article and client.
- › Manage purchasing and suppliers.
- › Automatic shipment of invoices and orders via email.
- › Analytical reports and customised queries.
- › Links to the most popular accounting systems (SP ContaPlus, SAP, Microsoft Axapta, Logic Control, A3Con, etc).
- › Automatic generation of invoices and other documents with templates.
- › Security and access control.
- › Automatic notifications of invoices and accounts.
- › Control of charges and payments.
- › Sending of invoices.
- › Periodic invoicing.
- › Export invoices, quotes and orders to PDF.

Perform a detailed follow-up of the invoicing process: **XML Invoicing Process** records when and who has created, modified or paid the invoice.

Keep your clients and suppliers up-to-date in real time. The tool will email your clients the invoices and orders generated with PDF copies.

**XML Invoicing Process** allows you to obtain instant reports and analytical diagrams of your company based on invoicing, for example: annual and monthly comparisons, sales volume by client, payment provisions, expense sectoring, total invoicing graphics, etc.

The system is capable of generating journal entries that can be processed by popular accounting applications: SP ContaPlus, SAP, Microsoft Axapta, Logic Control, A3Con, etc. Save time by not having to enter the data manually into your accounting program.

Configure periodic invoices for the system to execute automatically. Group your invoices into bundles to unite charges and payments.

Establish alarms so that **XML Invoicing Process** notifies you of a situation you want to control: non-payments, expiration dates, routine invoices...

Assign user permits relative to their role in the invoicing process. Configure visas to control invoice payment, limiting report access to management and recording each operation in the system.
