

Due to the nature of logistics, it is one of the business sectors that most benefits from technology. **XML Process Logistics** provides support to all processes involved in the proper management of goods storage, transportation and distribution.

It uses radio frequency systems, barcodes and labelling to manage receiving, delivery, quality control and goods preparation.

It locates and removes goods according to customised algorithms that optimise work time.

It completely automates the order preparation process with multiple criteria: FIFO, LIFO or customised. It allows the system to manage the placement of automatic picking.

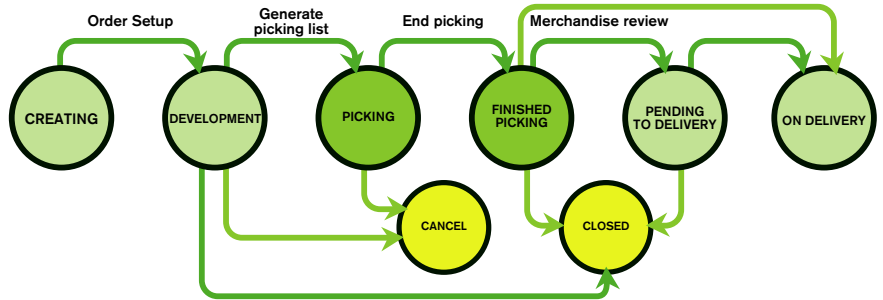

LOGISTICS

- A comprehensive solution for managing goods storage and logistical distribution and delivery process.
- It uses a system of radio frequencies and barcodes to provide support to critical processes.
- It offers its clients information in real time through the Internet: Online orders, stock inventory, goods tracking, etc.

- › Centrally stores documentation scans receipts and original documents.

XML Process Logistics is a multi-company, multi-client, multi-warehouse and multi-language tool that will allow you to manage all of your centres simultaneously and centrally.

Have detailed traceability reports on goods, entries and exits for a detailed follow-up of the delivery and distribution process.

Through the tool's Web access, your clients can make orders online and obtain customised PDF reports on stock, entries, exits and movement history.

XML Process Logistics has an automatic invoicing system for storage and distribution, with a completely customisable rate generator: Storage time, load size, handling, type of product, insurance, etc.

The system includes a complete incident processing module for storage and distribution incidents. Resolve any incidents in record time.

It plans the distribution and receiving of goods with waybills automatically generated by **XML Process Logistics**.

It makes stocktaking easy with an assistant to simplify the process.

XML Logistics Process allows you to identify goods through different criteria: Product code, batch and expiration date

With this tool you can centrally fill all documentation by scanning receipts and original documents.
