

PROJECT MANAGEMENT

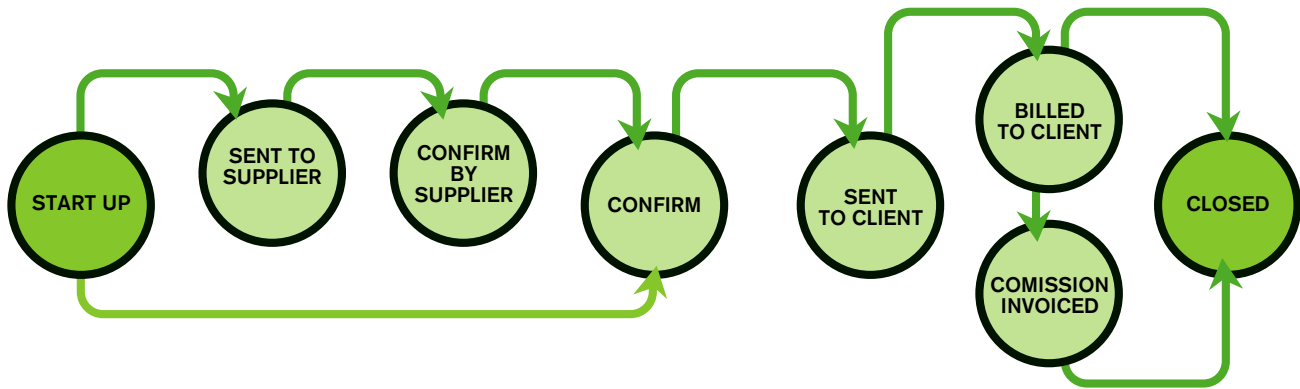

When company knowledge lies solely with people, company growth is deeply affected. **XML Process Project Management** lets you standardise work flow in your projects and helps you work according to them. This way you will have a complete x-ray at all times of each operation: Profits, costs, periods, deviations and resources invested.

It calculates project costs, highlights concepts and centrally stores all information relative to it: Delivery date, address, economic data, evaluations, etc.

Have each project's benefits in real time and act on any deviations in operations immediately.

- A comprehensive solution to manage and control your business operations.
- Know each project's profit in real time, along with any deviations in costs and deadlines. Obtain profit and progress reports.
- Define and standardise work flow for the different types of projects, to analyse process efficiency and know its status.

With **XML Process Project Management** you can enjoy the following advantages:

- > Design, standardise and control workflow of the key types of projects in a company.
- > Profit reports in real time.
- > Deviation control and progress level.
- > Automate routine tasks.
- > Automatic notifications to those involved.
- > Web publication of project data.
- > A record of all project communications.
- > Digitising and centralised document filing.
- > Create offers and budgets.
- > Automatic link to invoicing and accounting.
- > Customised alerts.
- > Can be used completely via the Internet.

Automate the most common tasks and save time, guaranteeing that they are always done in accordance with the defined process. Allow **XML Process Project Management** to generate documentation automatically relative to the stored data.

Keep a detailed record of all project communications, with clients and suppliers, with those in charge, or even with the resources of your own company.

XML Process Project Management allows you to digitise and centrally store all documents for each project.

With automatic notifications and alerts, **XML Process Project Management** ensures that all people involved check the situation of each operation at any time.

From the project data, the system can automatically generate the corresponding invoices. It combines the expenses from the suppliers' invoices.

With **XML Process Project Management** you can create offers and budgets from templates, and combine them with the file.

A project's key data can be published on the Internet to be viewed by those interested from anywhere: Clients, suppliers, company personnel, etc.

All of the tool's functions can be used from the Internet, allowing you to control all aspects of a project without having to be physically present in the office.

Visit www.xmlprocess.com to obtain more information about how **XML Process** can help you to boost your business.
